LUXURY MARKET REPORT APRIL 2024

www.LuxuryHomeMarketing.com

THIS IS YOUR LUXURY MARKET REPORT

MAP OF LUXURY RESIDENTIAL MARKETS

Welcome to the Luxury Market Report, your guide to luxury real estate market data and trends for North America. Produced monthly by The Institute for Luxury Home Marketing, this report provides an in-depth look at the top residential markets across the United States and Canada. Within the individual markets, you will find established luxury benchmark prices and detailed survey of luxury active and sold properties designed to showcase current market status and recent trends. The national report illustrates a compilation of the top North American markets to review overall standards and trends.

Copyright © 2023 Institute for Luxury Home Marketing | www.luxuryhomemarketing.com | 214.485.3000

The Luxury Market Report is a monthly analysis provided by The Institute for Luxury Home Marketing. Luxury benchmark prices are determined by The Institute. This active and sold data has been provided by REAL Marketing, who has compiled the data through various sources, including local MLS boards, local tax records and Realtor.com. Data is deemed reliable to the best of our knowledge, but is not guaranteed.

- LUXURY REPORT EXPLAINED -

The Institute for Luxury Home Marketing has analyzed a number of metrics — including sales prices, sales volumes, number of sales, sales-price-to-list-price ratios, days on market and price-per-square-foot – to provide you a comprehensive North American Luxury Market report.

Additionally, we have further examined all of the individual luxury markets to provide both an overview and an in-depth analysis – including, where data is sufficient, a breakdown by luxury single-family homes and luxury attached homes.

It is our intention to include additional luxury markets on a continual basis. If your market is not featured, please contact us so we can implement the necessary qualification process. More in-depth reports on the luxury communities in your market are available as well.

Looking through this report, you will notice three distinct market statuses, Buyer's Market, Seller's Market, and Balanced Market. A **Buyer's Market** indicates that buyers have greater control over the price point. This market type is demonstrated by a substantial number of homes on the market and few sales, suggesting demand for residential properties is slow for that market and/or price point.

By contrast, a **Seller's Market** gives sellers greater control over the price point. Typically, this means there are few homes on the market and a generous demand, causing competition between buyers who ultimately drive sales prices higher.

A **Balanced Market** indicates that neither the buyers nor the sellers control the price point at which that property will sell and that there is neither a glut nor a lack of inventory. Typically, this type of market sees a stabilization of both the list and sold price, the length of time the property is on the market as well as the expectancy amongst homeowners in their respective communities – so long as their home is priced in accordance with the current market value.

REPORT GLOSSARY

REMAINING INVENTORY: The total number of homes available at the close of a month.

DAYS ON MARKET: Measures the number of days a home is available on the market before a purchase offer is accepted.

LUXURY BENCHMARK PRICE: The price point that marks the transition from traditional homes to luxury homes.

NEW LISTINGS: The number of homes that entered the market during the current month.

PRICE PER SQUARE FOOT: Measures the dollar amount of the home's price for an individual square foot.

SALES RATIO: Sales Ratio defines market speed and determines whether the market currently favors buyers or sellers. A Buyer's Market has a Sales Ratio of less than 12%; a Balanced Market has a ratio of 12% up to 21%; a Seller's Market has a ratio of 21% or higher. A Sales Ratio greater than 100% indicates the number of sold listings exceeds the number of listings available at the end of the month.

SP/LP RATIO: The Sales Price/List Price Ratio compares the value of the sold price to the value of the list price.

"Positive seller sentiment is reflected in the uptick of new properties entering the market, which in turn, is fueling the opportunity for buyers to fulfill their new home expectations."

NORTH AMERICAN LUXURY REVIEW

A Stronger but Variable Spring Market

March, often heralded as the commencement of the spring market, not only marks the awakening of nature but also provides insights into the trajectory of the real estate landscape for the ensuing months.

After six months of steadily increasing levels of inventory and sales, March's statistics also tell a story of continued strength. Positive seller sentiment is reflected in the uptick of new properties entering the market, which in turn, is fueling the opportunity for buyers to fulfill their new home expectations.

In the luxury single-family market, inventory levels grew by 24.1% compared to March 2023, and by 5.8% compared to February 2024. New inventory entering the market also comparatively increased by 18.7% and 9.4%, respectively.

In the luxury attached property, market inventory levels grew by 37.7% compared to March 2023, although fell by 5.1% compared to February 2024. Comparatively, new inventory entering the market increased by 20.8% but fell by 3.8%, respectively.

Although inventory has increased annually for both single-family and attached properties, it still needs to be recognized that active listings remain approximately 40% lower than pre-pandemic levels.

Sales, on the other hand, have increased both year-over-year and month-over-month. Sales of luxury single-family homes grew by 7.5% compared to March 2023, but more significantly by 31.1% compared to February 2024. Sales of luxury attached properties grew by 6.3% compared to March 2023, but again more significantly by 25.7% compared to February 2024.

This higher demand for luxury properties also saw homes close quicker during March, selling nine days faster than in February 2024 for single-family homes and ten days faster for attached properties.

Overall, the market is showing that it has become more favorable to sellers, with the sales ratio for

single-family homes at 27.4% and 23.2% for attached properties. This is a change from the last few months, which saw the trend move towards a more balanced market.

Typically, the sales ratio, i.e., how fast the market is moving, is a great way to measure the status (i.e., buyer, seller or balanced markets), as it compares the level of inventory remaining against the number of sold properties for that month.

Market Dynamics: Not All Markets are Equal.

March's trend back to a seller's market is mostly due to the significant increase in sales that, despite considerable increases in new listings, still saw the overall inventory level remain below the 10-year norm.

However, this is not true at the local level, where significant differences between markets have continued to increase over the last few months. Some markets have become more favorable for buyers, while others remain firmly in control of the sellers, and the remainder are favorable to neither.

For instance, East Bay saw a sales ratio of 138.1%, indicating that there were more sales than new listings entering the market during March. Greater Seattle saw 86.2 out of every 100 homes sell, i.e., an 86.2% sales ratio, and St. Louis saw 82 out of every 100 homes sell during March.

At the other end of the spectrum, Whistler in Canada saw very few sales, with a 1.4% sales ratio for its luxury homes. Fountain Hills in Arizona reported only 4.8 luxury homes sold out of 100 i.e., a 4.8% sales ratio, while South Walton in Florida fared slightly better with a 6.7% sales ratio.

On the balanced side, three Florida markets: Coastal Pinellas, Marco Island, and Broward County all reported sales ratios trending downward into the 12 percentiles, thereby leaning towards a buyer's market. Whereas Toronto, Kauai, and Sonoma County in California trended upwards into the 20 percentiles, towards a seller's market.

Equally confusing is that in some markets, home prices continue to increase, while in others, they are on a downward trajectory. Different price bands within the same market also report differing results, and it's not always the lower-priced properties that are selling the fastest!

Additionally, results can seem to be inconsistent from month to month, especially in smaller luxury markets where the sales volume is traditionally low, and prices cover a very broad range!

So how are buyers and sellers meant to understand whether it's a good time to buy or sell?

Interpreting Statistical Data

Statistical data at the macro level not only provides us with an insight into the overall sentiment of buyers and sellers but also an objective overview of market trends, as it's based on empirical evidence and quantitative analysis.

At the local level, statistical data is even more important because it is less prone to bias and subjectivity, unlike anecdotal evidence or personal opinions. By examining various metrics, including property prices, sales volumes, local economic influences, and demographic trends, buyers and sellers will be able to gain clearer insights.

Drilling down even further, one of the most important parameters to consider is the level of available inventory for similar properties within the buyer's or seller's local market - not always an easy task in the luxury segment, where homes often have a list of unique attributes.

This needs to be taken in conjunction with reviewing the availability of properties in the same price point, property type, or specific neighborhood. By comparing this data to historical performance, it can identify long-term trends, cyclical patterns, and seasonal variations, all of which allow the buyer or seller to make an informed decision about the potential risk and/or return.

In addition, understanding whether currently listed properties have been on the market for a while or if any are unlikely to meet buyer expectations is important, as these factors can often distort the true demand for a specific property.

Recognizing Qualitative Research

While statistical data gives deeper insights into market dynamics and helps identify underlying trends, it needs to be appreciated that real estate decisions are also influenced by subjective factors such as personal preferences, lifestyle choices, and emotional attachments.

Equally, current and future community influences must be considered by both sellers and buyers. Markets are influenced by complex interconnected drivers such as economic conditions, regulatory policies, and demographic trends, as well as local factors such as culture, community dynamics, neighborhood characteristics, and urban development trends.

Qualitative research can be particularly useful for identifying emerging trends, preferences, and market shifts that can uncover emerging patterns of behavior, changing buyer requirements, and local market nuances.

Understanding these key parameters during this spring market will help buyers and sellers manage their expectations, leverage opportunities, and appreciate their true negotiation power within their specific market.

The art of selling and buying in this market needs a critical and analytical approach; understanding the realities and setting expectations accordingly will ensure that goals are achieved. For homeowners looking to buy or sell in today's market, we recommend working with a realtor who can capitalize on the preferences, trends, and demands in this dynamic and evolving environment.
