## **STUDENT VPN ON WINDOWS 10**

These instructions are for setting up the Palo Alto Global Protect Virtual Private Network (VPN) client on South Dakota School of Mines & Technology (SDSM&T) student personal and campus computers. Installing and connecting the VPN will enable students to access campus resources and software licensing. These instructions are intended for SDSM&T use only.

## INSTALL PALO ALTO GLOBAL PROTECT AGENT

1. Open a web browser and go to the site pa-vpn.sdsmt.edu

2. Login with your campus email address and campus computer password. This will be the same credentials you use to login to campus computers and may not be the same password as your student email.

	paloalto NETWORKS®
Username Password	first.last@mines.sdsmt.edu
Tussiloitu	LOG IN

3. Download the correct version of the GlobalProtect agent. For most users this will be the Windows 64-bit version. You can either choose to download the file or run it directly.

4. Run the downloaded GlobalProtect application and go through the installation steps.

5. Congratulations, you have installed the Palo Alto GlobalProtect agent.

## CONNECT TO PALO ALTO GLOBAL PROTECT AGENT

 Click the GlobalProtect world icon in the taskbar. You may need to click the up arrow to see it

 In the Window that appears type the portal address – pa-vpn.sdsmt.edu – and click the Connect button

	me to GlobalPro	
pa-vpn.	.sdsmt.edu	
	Connect	

3. Sign in with your student email and your campus computer password like step #2 in the above section.

Glo	obalProtect	
	ign In ogin credentials	
Portal: pa-vpn.se	dsmt.edu	
first.last@m	nines.sdsmt.edu
